

Four Corners Air Quality Task Force  
Cumulative Effects Workgroup Conference Call  
January 11, 2007

Participants: Mike George, NPS; Doug Blewitt, BP; Kevin Briggs, CO APCD

The call convened at 10 AM MST.

The groups discussed various mitigation strategy analyses. The group first talked about those being worked on by Doug Blewitt. The group talked about the likelihood that the Western Regional Air Partnership (WRAP) updates to its oil and gas emission inventory will be later than anticipated due to a current lack of response. Mr. Blewitt indicated that he is in the process of pulling inventory information together for engines in the Four Corners region based on New Mexico, tribal, and industry supplied information that he believes will be more accurate than is currently available. In this process, he is compiling data on rich-burn vs. clean-burn engines. Mr. Blewitt suggested he should have some a good portion of this information ready for discussion at the next in-person meeting in Durango, Colorado. Mr. Blewitt is also to work on estimating fleet information, but has not yet started that work.

Mike George is working on several other mitigation option analyses related to mobile sources. He indicated that he should be able to have some, those not needing the fleet information being acquired by Mr. Blewitt, completed prior to the Durango meeting, as well, to be discussed there.

The group set as a target to have the various work products to be discussed in Durango to the Cumulative Effects participants via e-mail a few days prior to the meeting, so the materials can be reviewed prior to the meeting.

The group also wanted to set aside a bit of time with the Oil & Gas Work Group in order to show them what we've got so far, and ask for comments from them. Mr. George took that as an action item to arrange.

The call adjourned at 10:35 MST.
